Fracture Mechanics 2026 · Homework · Cover sheet

The DCDC test

Véronique Lazarus • Corrado Maurini

Group _____ $W/R =$ _____ $R =$ _____ mm plane strain, $\nu = 0.2$

Take the pair of your group number on the parameter sheet, and write it here and on the first line of your report. No two groups have the same pair, and the answers to Questions 3 and 5 depend on it.

Students Two per group. Write the family name in capitals, and the parcours you are enrolled in.

1. _____ parcours _____

2. _____ parcours _____

What you did, and with what One line per question. Tick one box. Then name the AI tools you used, that is any large language model such as ChatGPT, Claude, Gemini, Mistral or Copilot, and say what you asked them. Write *none* when you used none: this is the best answer you can give.

Question	full	part	none	AI tool	What you asked it
1. Scaling	☐	☐	☐		
2. G by two methods	☐	☐	☐		
3. Short cracks	☐	☐	☐		
4. Long cracks	☐	☐	☐		
5. Concrete, size effect	☐	☐	☐		
Bonus. The cheese	☐	☐	☐		

We declare that we can explain every line of this report, and that the declaration above is complete.

Date and signatures

_____ _____ _____

This sheet is the first page of your pdf. It does not count in the four pages.

How the homework counts. At the last lecture, a ten-minute individual test, each student alone with their own report: ten multiple-choice questions on what you did and on your own curves, simple enough that whoever did the work answers them. Five correct answers out of ten, that is 10/20, validate the homework of the group. The final mark is then $\max(0.2\,\text{homework} + 0.8\,\text{exam},\ \text{exam})$, and the exam mark alone without the validation: the homework can only raise your mark.
